DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1 and 3-8 are rejected under 35 U.S.C. 102(b) as anticipated by Dougherty #2,128,740. Dougherty discloses a segment of sheet piling comprising a reinforcement (opposite 20, 21, that is convexly shaped) located at the angle between the panels. The sheet piling member also including male 25 and female connectors 31, and whereing the male connector has a reinforcement area 22 that is triangular shaped.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dougherty in view of Lewis #5,333,971. Dougherty discloses the claimed invention except for the sheet piling being made from anisotropic material. Lewis teaches that it is known to make sheet piling from anisotropic material such as plastics or fiberglass material as set forth at column 2, lines 26-30. It would have been obvious to one having

Application/Control Number: 10/695,234 Page 3

Art Unit: 3673

ì

ordinary skill in the art at the time the invention was made to make sheet piling from anisotropic material, as taught by Lewis in order to provide a more corrosion resistant sheet piling for example.

Response to Arguments

5. Applicant's arguments filed 7/19/04 have been fully considered but they are not persuasive. As broadly recited, Dougherty meets the convex shaped reinforcement. Dougherty shows a concave shape around 20, 21; however, opposite 20, 21 shows a convex shape.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Frederick L. Lagman whose telephone number is 703-305-7456. The examiner can normally be reached on Monday-Friday 9:00am to 5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Heather Schackelford can be reached on 703-308-2978. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
